National Institute on Alcohol Abuse and Alcoholism Total Cost: \$1,898,998
Predicting Alcohol Use and Alcohol Use Disorder Symptoms from Subjective Responses to Alcohol in a Laboratory Social Setting

This research aims to develop a new laboratory social drinking paradigm that predicts real-world alcohol responses and alcohol use disorder risk, and can serve as the next generation model for identifying lab-based predictors for future alcohol use disorder symptoms.

Role: PI

R01 AA026879 Wright (PI) 05/01/2020—04/30/2025
 National Institute on Alcohol Abuse and Alcoholism Total Cost: \$2,711,000

Using Smartphone Assessments for Personalized Prediction of Problematic Alcohol Use

This project will leverage machine learning, passive-sensing, and ecological momentary assessment, and apply them to study heterogeneity in daily alcohol use processes in young adult risky drinkers.

Role: Co-I

Pending

R03 AA030666 Creswell (PI) 09/01/2022—08/01/2024
 National Institute on Alcohol Abuse and Alcoholism Total Cost: \$165,451

Prevalence and Developmental Trajectories of Solitary Alcohol Use in US Young Adults

Using national samples of US young adults, this research aims to provide prevalence rates, historical changes, developmental trajectories, and risk factors associated with young adult solitary alcohol use.

Role: PI

R01 AA Narendran (PI) 09/01/2022—08/01/2027

 National Institute on Drug Abuse Total Cost: \$1,604,721

Testing the impact of tobacco product graphic warning labels at retail point-of-sale

The goal of this study is to test the effects of graphic warning labels on tobacco use risk in young adults and to examine mediators (e.g., affective reactions as assessed by the Facial Action Coding System) and moderators (e.g., gender, age, SES) of this increased risk.

Role: Co-I

L30 AA022509 Creswell (PI) 07/01/2013—06/30/2018
 National Institute on Alcohol Abuse and Alcoholism Total Cost: \$73,657

Mechanisms of addiction: Examining psychological, genetic, and contextual risk factors for substance use disorders

The goal of this NIH Loan Repayment project is to better understand risk factors for the development of substance use disorders in young adulthood through the use of secondary analyses of a longitudinal high-risk sample.

Genetic links to the reinforcing effects of alcohol in a social context

This study used measures of multiple response systems to examine the impact of alcohol on social bonding during an initial group interaction. The primary goal was to determine if persons with polymorphic variation in genes associated with increased risk for alcohol use disorder are more sensitive to alcohol's rewarding effects in a social setting.
